Olympian 1200

vertical system

Application

The Opal Olympian System 1200 vertical blind offers a solution to the commercial sector which requires little maintenance and will consistently give an elegant look to any room or area. Vertical blinds can be installed to the majority of windows and all are manufactured to customer's requirements. The Olympian range is available with 89mm or 127mm louvres to compliment the window size and in a vast selection of fabrics with straight, curved or twin-track headrails. All of our vertical blinds are manufactured with aluminium components and metal chains which ensure durability throughout the lifetime of the blinds.

Control

Opal Olympian vertical blinds are available with a number of control methods including chain and cord operation, wand, crank, motorised and twin-track.

Motorised blinds including remote control, switch control, infra-red control and automated options are available with solar detectors and timers for controlling blinds in groups or centrally.

Fabrics

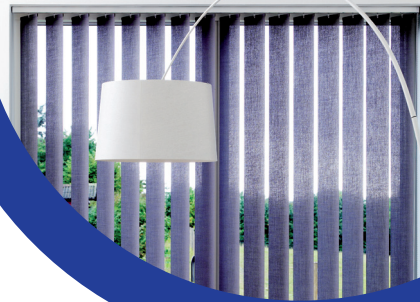

As with all other blinds within the Olympian range, all fabrics are fire retardant to BS5867:Part 2 Type B and are available with a wide range of properties including dim-out, black-out, solar protection and wipe-able. Anti-bacterial properties are also available on certain fabric ranges.

The majority of our fabrics can be sponge cleaned and some are washable.

Our Olympian range of fabrics endeavours to suit the majority of schemes but should the need arise for a particular fabric Opal will endeavour to source from it's wide range of quality suppliers.

Safety Features

All blinds within the Olympian range come with child safety features as standard. Sewn in bottom weights and removable cranks are also available as options.

1210

Chain operated vertical blinds with white aluminium headrail and metal operating chain, louvre weights and white linking chains.

1220

Wand operated vertical blinds with white aluminium headrail and metal operating chain, louvre weights and white linking chains.

1240

Motorised vertical blinds with options for infrared, remote control and automated controls. White aluminium headrail and metal operating chain, louvre weights and white linking chains.

1250

Twin white aluminium headrails with metal operating chain, louvre weights and white linking chain. Louvres are fixed between both headrails and suitable where the louvres need to remain rigid, e.g. sloping windows.

1260

Mono controlled chain operated vertical blind enables the louvres to be traversed and tilted simply and safely by means of a continuous chain loop.
