Olympian 1400

venetian blind system

Application

The Opal Olympian System 1400 venetian blinds are the classic blind for controlling the amount of light into any room or area. They are suitable for doors and most types of windows including skylights and conservatories and a practical solution in areas where fabric blinds would not be suitable. They are available in 15mm, 25mm, 35mm and 50mm slats for aluminium venetians and 25mm, 35mm and 50mm slats for wooden venetians.

Control

The standard range of Opal Olympian venetian blinds can be tilted and raised or lowered by separate controls. The tilting operation is by wand and cords are used to raise and lower the blind. These controls can be on either side of the blind to suit.

We can also offer operation with mono-control, crank or motorised to suit.

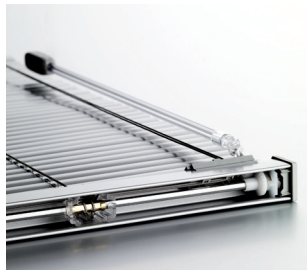

Colour

The slats are available in a wide choice of colours with a selection of finishes in the aluminium range including matt, gloss, metallic and perforated. Headrails are available to match or co-ordinate with the slat colour and matching pelmets are standard with the wooden venetian blinds.

Tapes are also available, in a colour to match or co-ordinate with the wooden venetians, which elegantly hide the cords.

Fire Retardancy

As with all other blinds offered in the Olympian range, System 1400 venetian blinds are fire retardant to current British standards.

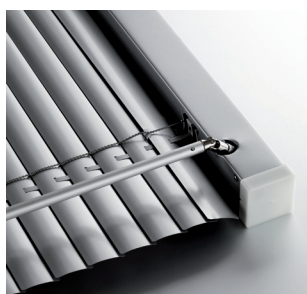

1410

Free-hanging venetian blind with dual controls, cord for lifting and wand for tilting. Suitable where sill needs to be kept clear or for windows which are difficult to access.

1420

Aluminium venetian blind with mono-control which lowers and tilts the blind with one cord, eliminating cord tangles and the use of cleats.

1430

Crank operated venetian blind with removable crank, ideal where anti-tamper properties are required or in areas where risk of patient self harm is an issue.

1440

Motorised roller blinds with options for switch control, remote control, timers and infrared either singularly or in groups.

1450

The Perfect Fit® system is unique because the window blind fits neatly into a frame which moves together with the windows and doors when they are opened and closed giving you the perfect combination of shade and ventilation.

- No drilling or screwing into the window frames for a quick and clear installation.
- Reduced gaps at the edge of the blinds increases privacy.
- Child safe because there are no loose cords or loops.
- Easily removable for cleaning.
